## **DETAILED ACTION**

The election mailed 11/23/2004, which inadvertently did not include claims 51-58, is hereby VACATED and replaced with the instant restriction.

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 39-50, 54-58 drawn to genetic construct suitable for transforming a plant comprising a polynucleotide encoding a starch binding domain and a GBSS1 from potato and transformed plants and seeds or tubers.

Group II, claim(s) 39-50, 54-58 drawn to a genetic construct suitable for transforming a plant comprising a polynucleotide encoding a starch binding domain and an *E. coli* glycogen branching enzyme and transformed plants and seeds or tubers.

Group III, claim(s) 39-50, 54-58 drawn to a genetic construct suitable for transforming a plant comprising a polynucleotide encoding a starch binding domain and a potato kinase R1 and transformed plants and seeds or tubers.

Group IV, claim(s) 51-53, drawn to a fusion protein.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature of a nucleotide sequence that interacts with starch or starch granules was taught in the art. Chen *et al.* Biotechnology Progress, 1991, Vol. 7, pp. 225-229; teach improved adsorption to starch of a beta-galactosidase fusion protein containing the starch-binding domain from *Aspergillus* glucoamylase (see abstract). Further, the enzymes of Claim 40, (starch synthase I of Group I, glycogen branching enzyme of Group II, potato kinase R1 of Group III), are recognized in the art to each have a different core structure, different specific activities and would not be expected to behave in the same fashion, producing different products and phenotypes when transformed into a plant; and since separate consideration would be required for each enzyme, restriction into separate groups is proper (See MPEP, Annex B, Unity of invention, part I, (f)Markush practice).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
